

# Pegah Rahmani

**Address:**

Department of Economics  
University of Toronto  
150 St. George St.  
Toronto, Ontario  
M5S 3G7, Canada

**Phone:** +1-437-987-1545**Email:** pegah.rahmani@mail.utoronto.ca**Website:** www.pegahrahmani.com

---

**Research Interests:** Behavioral Economics, Micro Theory, Decision Theory, Experimental Economics

## EDUCATION

Ph.D. in Economics, University of Toronto 2026 (Expected)  
*Committee:* Yoram Halevy (supervisor), Marcin Peski, Colin Stewart

M.Sc in Economics, Sharif University of Thechnology 2020

B.Sc in Electrical Engineering, Sharif University of Thechnology 2017  
Minor in Computer Science

## RESEARCH

**Correlation-sensitive multi-utility model**

(Job Market Paper)

**Anticipated Regret**

(with David Dillenberger, Yoram Halevy, Johannes Hoelzemann, Gideon Nave)

## ACADEMIC EXPERIENCE

Teaching Experience 2022 - 2023

- ECO 326: Advanced Economic Theory - Micro

Teaching Assistant 2021 - present

- ECO 200: Microeconomic Theory
- ECO 316: Applied Game Theory

Research Assistant 2021 - 2022

- Xianwen Shi: Proofreading
- Anton Tsoy: Proofreading

## LANGUAGES

English, Farsi (native), French (beginner)

*Programming languages:* Stata, R, Python, MATLAB, C++

## Correlation-sensitive Multi-utility Mode

(Job Market Paper)

This paper provides an axiomatization of a general correlation-sensitive model of decision making under uncertainty without requiring completeness of preferences. The model is represented by a correlation-sensitive multi-utility framework. The axioms underlying the characterization are reflexivity, monotonicity, strong independence, and continuity. Whereas Lanzani (2022)'s result employs completeness, strong independence, and Archimedean continuity, the present approach replaces completeness with reflexivity and monotonicity, thereby accommodating incomplete preferences. When transitivity is additionally imposed, the model collapses to the expected multi-utility representation, Dubra et al. (2004). These results establish a unified axiomatic foundation for correlation-sensitive models and clarify the roles of incompleteness and transitivity in shaping preference representation under uncertainty.

## Anticipated Regret

(with David Dillenberger, Yoram Halevy, Johannes Hoelzemann, Gideon Nave)

A well-known phenomenon in the decision science literature (Loomes and Sugden 1982, Bell 1982, and Fishburn 1982) is that anticipated regret affects choices and valuations. We analyze Kahneman and Tversky's (1979) famous decision problem of the certainty effect – a special case of the common ratio effect 'a la Allais (1953) as well as extensively documented probability insensitivity in mid-ranges. We propose that these phenomena are, in fact, manifestations of anticipated regret; offer a behavioral definition of anticipated regret without committing to a specific functional representation; and document evidence of anticipated regret in a controlled lab setting. We find that more than half of our participants exhibit strict Certainty Effect, and about two-fifths of them exhibit aversion to anticipated regret.
